SUMMARY

Senior Software Engineer with 4.5+ years of experience building distributed systems and production-grade agentic AI applications at Visa. Experienced in LLM-powered agents, knowledge graphs, distributed orchestration, and high-availability architectures using Java, Spring Boot, Temporal, and Hazelcast.

EXPERIENCE

Senior Software Engineer March 2024 – Present
Visa Inc *Bangalore, India*

- Built an AI-powered Context Hub converting codebases, PRDs, and documentation into a knowledge graph using AST parsing and embeddings, enabling cross-service agents to debug production incidents via MCP and reducing triage costs by 60%.
- Engineered a reusable AI triage-agent base image integrating DB MCP, ClickHouse logs, codebase knowledge graphs, and automated triage loops, enabling configuration-driven adoption across services and reducing incident resolution time by 70%.
- Led two engineers in developing an LLM-driven, multi-tenant agentic workflow builder that translated natural language into automated pipelines, increasing onboarding velocity by 30%.
- Co-designed a distributed orchestration framework using Temporal to provision managed services with compliance controls, reducing cross-team operational overhead by 80%.
- Transformed synchronous Active-Active application flows into a concurrent, event-driven architecture, improving execution speed by 40% while strengthening fault tolerance.
- Integrated Hazelcast distributed locking into Activiti BPMN to prevent workflow conflicts across clusters, resolve replication failures, and improve throughput by 40%.
- Designed a SQL and Quartz-based archival strategy to offload 50M+ historical rows, reducing query latency by 70% for critical application workflows.
- Automated alert suppression for a 500K+ server fleet using Netcool to filter false positives from restarts and CPU spikes, eliminating manual intervention for 1,000+ routine alerts daily.
- Built a framework to migrate Ansible playbooks and projects from Bitbucket to GitHub, saving 500+ hours of manual migration effort.
- Mentored four junior engineers on distributed systems debugging and conducted technical sessions to resolve blockers and share engineering best practices.

Software Engineer June 2022 – March 2024
Visa Inc *Bangalore, India*

- Optimized critical disaster recovery workflows using Quartz and Hazelcast, reducing execution time by 90% and increasing user onboarding by 40%.
- Built per-server diagnostics by parsing Ansible batch logs and migrating logs to Elasticsearch, reducing manual effort by 60% and extending retention to one year.
- Integrated a secure vault service with credential reuse across data-center zones, accelerating onboarding for security compliance workflows by 60%.
- Engineered background ETL schedulers for a zero-downtime MongoDB-to-MySQL migration, preserving data availability throughout the transition.

EDUCATION

B.E. Electronics and Communication, Anna University, MIT Campus Aug 2018 – June 2022
CGPA: 9.43/10

SKILLS

Languages: Java, Python, C/C++, SQL, TypeScript

Backend: Spring Boot, Spring, Hibernate, Node.js, Angular

Distributed Systems: Temporal, Hazelcast, Activiti BPMN, Quartz, Event-Driven Architecture

Data & Infrastructure: MySQL, MongoDB, ClickHouse, Elasticsearch, Docker, Kubernetes, Ansible

AI & Agents: LLMs, RAG, MCP, Knowledge Graphs, Agent Evaluation, LangChain, LangGraph, Claude SDK

ACHIEVEMENTS & COURSEWORK

Competitive Programming: LeetCode rating 2100+; global rank 126/19K in Biweekly Contest 102; top-1K finish in 15 other contests.

Relevant Coursework: Distributed Systems and Architectures (Michael Pogrebinsky); Deep Learning Specialization and Agentic AI (Andrew Ng).
